

KUNAL SAVALE

Automation Test Engineer | SDET | Quality Assurance

+91-9767970641 | savalekunal07@gmail.com | linkedin.com/in/kunal-savale07 | github.com/kunal-savale

Playwright • API Testing • Jenkins CI/CD • Selenium Testing • Java • Automation Testing • Git

PROFESSIONAL SUMMARY

QA Automation Engineer with 4+ years of experience in test automation, including hands-on experience with Playwright for designing, developing, and maintaining automation frameworks for web applications. Skilled in UI and API test coverage, Selenium WebDriver, PyTest, and Cucumber (BDD), with strong exposure to cross-browser testing and Jenkins-based CI/CD integration. Experienced in GenAI and RAG platform testing, including RBAC, audit logging, multilingual validation, semantic retrieval, query routing, and MCP integration testing. Strong analytical and communication skills with a proven record of improving test coverage, mentoring team members, and driving reliable, high-quality product releases.

SKILLS

Automation Testing: Playwright, Selenium WebDriver, PyTest, Cucumber (BDD), TestNG, Appium, test automation framework design & strategy, UI automation, cross-browser testing (Chromium, Firefox, WebKit), functional, regression, integration, system, UAT, smoke, and stress testing

API & Data Testing: REST API testing, Postman, Requests, SQL, MongoDB, Milvus, test data validation, backend testing, end-to-end UI & API coverage

CI/CD & DevOps: Git, GitHub, Jenkins, CI/CD pipeline integration, Kubernetes, kubectl, release validation, version control workflows

GenAI & Platform Testing: RAG testing, LLM testing, semantic retrieval validation, MCP integration testing, query routing validation, citation accuracy checks, grounding checks, redaction testing, multilingual testing, audit logging, RBAC, guardrail validation

Programming & Tools: Python, Java, JIRA, TestRail, Confluence, ServiceNow, MobaXterm

Domains: GenAI platforms, Salesforce, insurance, web applications

WORK EXPERIENCE

QA Automation Engineer | Cohesity (via Xpheno)

Aug 2025 – Jul 2026

Enterprise RAG-based GenAI platform testing across Metadata Filters, Context Aware, Conversation Threads, Permission Management, audit logging, RBAC, multilingual support, redaction, and Copilot/MCP integrations.

- Designed and maintained Playwright-based UI and API automation to strengthen end-to-end test coverage for the enterprise GenAI platform, alongside functional, regression, API, and release testing cycles.
- Validated audit logging, RBAC, multilingual support, redaction, and Copilot/MCP integrations, ensuring compliance-critical features met release quality standards.
- Integrated automated test execution into Jenkins CI/CD pipelines with Git-based version control, improving release confidence and enabling faster feedback for development teams.
- Improved release confidence through defect analysis, test planning, test execution, automation support, and cross-functional collaboration with developers and product teams.
- Mentored team members on automation best practices and contributed to test strategy and framework design discussions.

QE Analyst | Nexvant Solutions

2023 – 2025

Quality engineering for customer-facing digital platforms, including SAM+ and Digital.

- Automated key test cases for SAM+ and Digital platforms using Selenium and Java, reducing manual testing effort by 60%.
- Built BDD-style automation coverage using Cucumber to create readable, maintainable, and CI-friendly test scenarios.
- Supported release readiness for web and Salesforce-connected platforms through functional testing, regression testing, defect tracking, and automation validation.

Associate Consultant | Atos-Syntel

2022 – 2023

API and automation testing for Allstate insurance applications and business workflows.

- Designed and executed API test cases using PyTest, Python, Selenium, and Requests, improving test coverage by 90%.
- Automated end-to-end API and functional tests using Git and Jenkins-based CI/CD workflows, reducing manual QA effort by 70% and improving release quality.

PROJECTS

GAIA — Enterprise RAG-Based GenAI Platform / *Cohesity*

- Worked on GAIA, an enterprise RAG-based GenAI platform enabling natural-language queries over enterprise backup data using semantic indexing, semantic retrieval, and LLM-based response generation.
- Built and maintained Playwright automation scripts alongside Go, Python, PyTest, Watchmen, YAML-based suites, JSON, and VanillaGinkgo for regression and scale-test validation, supporting release readiness.
- Integrated automated regression suites into Jenkins CI/CD pipelines with Git version control for continuous validation across releases.
- Identified and documented 10+ high-impact defects in guardrails, hallucination handling, metadata filters, and audit logging, including UI/backend log-count mismatches, rolling-window data loss, and incorrect modified-entry behavior.
- Executed manual, functional, regression, and API testing across dataset creation, document indexing, semantic retrieval, and answer-generation workflows.
- Improved Copilot and MCP query-routing accuracy from 46% to 100% across 81 structured test queries through targeted validation and defect analysis.
- Performed deployment and upgrade validation on multi-node Kubernetes clusters using kubectl, iris_cli, and MobaXterm.
- Prepared a framework-agnostic test plan for scale, performance, stress, and resiliency testing of compliance-critical audit logging features.

SAM+ / Digital / *Nexvant Solutions*

- Supported QA for a digital platform covering product details, Salesforce integration, usage tracking, and AI chatbot workflows.
- Executed functional, regression, integration, and user acceptance testing across key business modules.
- Built BDD-based automation support using Selenium, Java, and Cucumber to create readable and maintainable test scenarios.
- Validated 20+ features and UI fixes, contributing to a 40% drop in UAT rework and smoother releases.

Allstate Insurance / *Atos-Syntel*

- Worked on insurance applications used by agents and policyholders in the car insurance domain.
- Built and enhanced automation coverage for end-to-end functional and API testing using Python, PyTest, Selenium, Git, CI/CD, Jenkins, Postman, and Requests.
- Developed an automation framework, test scripts, test cases, and test data for insurance application workflows and release cycles.
- Applied SDLC and STLC knowledge to test planning, execution, bug reporting, and release support.

EDUCATION

- Bachelor of Technology (B.Tech) | R. C. Patel Institute of Technology | 2021 | CGPA: 7.1

CERTIFICATIONS

- Selenium WebDriver with Java Framework — Udemy
- Selenium WebDriver with Python Framework — Udemy
- Azure Fundamentals — Microsoft

ACHIEVEMENTS

- Awarded Best Improved Performer of the Year at Nexvant Solutions.
- Contributed to the delivery of the SAM+ Digital Platform with zero major defects in production.
